
data is stored in the drawing. UserData and UserDataXRef The user data includes:

- UserData (which is stored in the drawing)
- UserDataXRef (which is stored outside the drawing)
- Attribute fields
- Hidden lines, arcs, text, etc.
- User settings, such as line style, color settings, annotation settings, layer settings, and so on.

A user's drawing can have multiple user data items (this is called data redundancy).

Data table The data table, also called the drawing table, is a storage area where AutoCAD places information about drawing elements such as blocks, tables, labels, text boxes, and so on. A block may have a number of properties such as type, drawing order, and so on. For example, an office worker may create a drawer layout of a desk, and then insert a number of different documents, such as handwritten notes, a calendar, a report, and so on, into the drawer. The worker may later move these elements around to their appropriate place in the desk. Each of these elements is a block, and each block has different properties. For example, each block in the desk may have the name of the document it holds. It may have a placement order so that if you move the paper calendar, it will move the other elements on the paper. The calendar may have a color associated with it. Each of these properties is stored as attributes.

Attributes AutoCAD can associate with a drawing element one or more attributes that apply to that element. Attributes have a unique name that identifies the attribute; for example, the name of an attribute may be Name. Some attributes are created by the user, or automatically by the system, and are used to represent information, such as color, style, symbols, and so on.

Object The AutoCAD object is an object that has properties. For example, a line is an object, with properties such as width, color, type, 5b5f913d15
